

CHAT Web Design 1

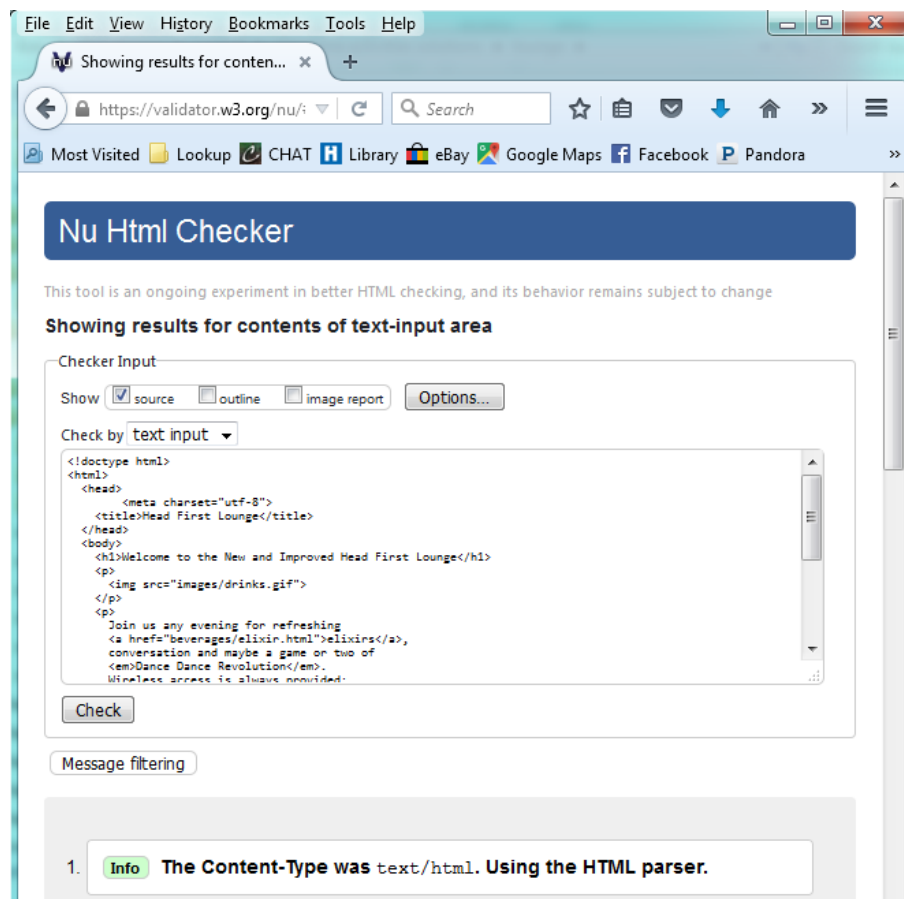

Chapter 6

Validation Assignment

For this assignment you will need to get your web pages up to HTML5 standards.

1. Add the correct doctype to each page.
2. Add meta tags to specify the correct character encoding.

After you have done that for each of your pages, use the validator at <http://validator.w3.org> to check each of your pages. To show me that you have done this, you need to print the web page that shows you passed. It will look like this:

Note: You need to print this for *each* of your pages, but you may only need to print Page 1 for each Validation, as I only need to see that it passed. (You can shrink the HTML box if needed.)
