Gimp Assignment 2

Create:

1. Create a logo for a real or imaginary company, or for your website. It does not have to have a transparent background but it would be a good idea. It must include the following:
   - Text
   - Original graphic made with the paths tool
   - At least one effect or filter

2. Create a back arrow to use on your web page. It <u>must</u> have a transparent background. (Put all of your text and artwork on transparent layers and have a blank white layer on the bottom.)

Edit:

Open the following image files with GIMP and make the designated edits:

- Perspective.jpg – Use the Perspective Tool in the toolbox to make the sides of the building almost vertical. Leave just a little slant to make it realistic to the eye.
- Lighten-minion.jpg – Lighten the background by duplicating the layer, lightening the background using levels or curves, then add a layer mask to the original image, painting on it to make the original minion show through.
- Pooh.jpg and bridge.jpg. Carefully cut pooh out of the image and paste him on the bridge of the other image. (Make a transparent layer on the bridge to paste it on.) You will have to scale or reduce the size of pooh so that he's the correct size for the bridge.
- Rose.jpg – using a duplicated image layer that is desaturated, along with a layer mask, make all of this image black and white except for the read flower petals.

Save all files in jpg or png format (use Export). If your image has transparency you must save it as a png.
